General responsibility assignment software patterns (or principles), abbreviated GRASP, consist of guidelines for assigning responsibility to classes and objects in object-oriented design.. The different patterns and principles used in GRASP are controller, creator, indirection, information expert, high cohesion, low coupling, polymorphism, protected variations, and pure fabrication.

GRASP (object-oriented design) - Wikipedia

In software engineering, multitier architecture (often referred to as n-tier architecture) or multilayered architecture is a client–server architecture in which presentation, application processing, and data management functions are physically separated. The most widespread use of multitier architecture is the three-tier architecture.. N-tier application architecture provides a model by ...
