

congruent and similar figures pdf

3 Objective 6: Congruent triangles (Standards 8.2 and 8.5.3) (See pages 288 - 290 in book for additional examples.) 3. The figures below are similar.

Unit 4 – Similar and Congruent Figures Study Guide Name Per.

The ratio between the areas of similar figures is equal to the square of the ratio of corresponding lengths of those figures (for example, when the side of a square or the radius of a circle is multiplied by three, its area is multiplied by nine – i.e. by three squared). The altitudes of similar triangles are in the same ratio as corresponding sides.

Objects that can be transformed into each other by rigid transformations and mirroring (but not scaling) are congruent. An object is therefore congruent to its mirror image (even if it is not symmetric), but not to a scaled version. Two congruent objects always have either the same shape or mirror image shapes, and have the same size.
