

dictionary of electrical engineering pdf

In electrical engineering, an armature is the power-producing component of an electric machine. The armature can be on either the rotor (rotating part) or the stator (stationary part) of the electric machine.. The armature interacts with the magnetic field (magnetic flux) in the air-gap; the field component can comprise either permanent magnets, or electromagnets formed by a conducting coil ...

@theprowler The closest I can get to recreating the problem is if cars = {1:4, 2:5} then cars[x] is an integer mapped to the key x rather than a set mapped to the key x. In this case, you don't need to use the for y in cars[x]: line because there's only one value you're retrieving, unless you're using something like a list or set of integers then it should work.
